

Live Wires. Deadly Danger.

DOWNED POWERLINE SAFETY

- 01** **Stay at least 50 feet away.**
Electricity can arc through the ground and surrounding objects.
- 02** **Do not touch anything it's touching.**
That includes water, fences, cars, or trees.
- 03** **Warn others to keep their distance.**
Use your voice or hand signals. Don't go near to help.
- 04** **Call 911 and your power company immediately.**
Report the exact location so crews can secure it safely.

Do not attempt to rescue somebody already in contact with an energized line - the current can travel to you as well.
