

GENERATOR SAFETY

THEY DEPEND ON YOU. BE PREPARED.

Generator safety helps prevent deadly carbon monoxide poisoning, fires, electrical shock, and electrocution during power outages and emergencies.

01

Keep generators outside

Running one inside or in a garage can cause deadly carbon monoxide buildup.

02

Never refuel while running

Shut the generator off and let it cool to prevent fire or explosion.

03

Plug into appliances, not outlets

Never backfeed a home outlet; it's dangerous and illegal without proper transfer switches.
